

P2Nav Essentials Course

Introduction

Many delegates new to PRINCE2® are initially overwhelmed by the requirement to control soooo many management products for each project. Then the requirement to have version control recovery strikes them like a tsunami. They feel they are drowning. Well relax there is a simple answer. Navigating your way through many documents can be controlled from a single screen display!

The engine driving P2Nav is Microsoft's Sharepoint in the cloud (or your preferred repository).

This one day essentials course enables delegates, hands-on experience using the familiar (for PRINCE2® practitioners) Calendar sample examination scenario. After a brief introduction to basic Sharepoint functionality each delegate will be enabled to update existing documents, create new documents and delete others.

Further product information is included in a companion document called "P2Nav Description".

Design basis

The design basis of P2Nav is included in a companion product called "P2Nav Brochure".

Course duration:

1 day

The Package

Included in the cost of the course are:

- A concise operations manual
- An attendance certificate
- Registration onto your personal site (upon completion of documentation)

Who should attend?

- Middle and senior management of organisations working with programmes and projects
- PRINCE2® practitioners who wish to understand how projects interface with configuration management
- Project managers wanting to find "a better way" for easy-peasy project administration
- Anyone wanting a basic understanding of globally recognized configuration management standards
- Those who participate in project management support and are looking for "a better way"
- Organisations planning to embed PRINCE2® as their preferred methodology

Trainer Profile

The Stratsure trainer for this course has been an accredited MSP® practitioner for a number of years and is also an accredited PRINCE2® trainer.
